

Customer Case Study

From Data Overload to Financial Clarity

K-12 School District • 6 Schools • 2,000+ Students

How a K-12 School District Transformed Budget Visibility with FiscalVue

Customer Overview

A growing K-12 school district was looking for a better way to manage and share financial information across the organization. As enrollment increased and budgeting became more complex, finance leaders needed a solution that could provide timely, accurate budget visibility while reducing the administrative burden of answering routine budget questions.

The Challenge

Like many K-12 districts, the district relied on a fund accounting ERP system to manage financial data. While effective for financial management and compliance, it created several challenges for day-to-day decision-making:

- Budget data was difficult for non-financial leaders to interpret.
- The finance office handled frequent manual budget inquiries.
- Continued growth increased the need for real-time, scalable financial insight.

Like most ERP systems, the district's financial platform was excellent at storing data but wasn't designed to make budget information easy for everyday users to understand.

The Solution: FiscalVue

The district implemented **IntelliCloud™ FiscalVue** alongside its existing ERP to bridge the gap between complex financial data and real-time, role-based decision-making.

Key capabilities deployed:

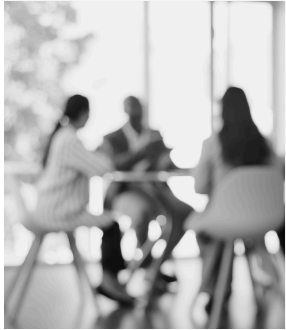

- **Real-time, role-based budget dashboards**
- **Self-service access for principals and department leaders**
- **Automated reporting layered on top of the existing ERP**

Implementation Approach

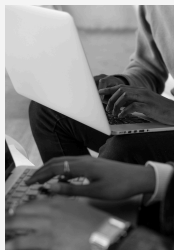

FiscalVue was deployed with a focus on **speed, usability, and minimal disruption**:

- Integrated with the district's existing financial systems—no ERP replacement required
- Configured dashboards tailored to finance leaders, principals, and department managers
- Enabled immediate access to live financial data across the organization

Because the platform is designed for non-technical users, adoption was rapid with minimal training required.

“FiscalVue gives our team and our building leaders the ability to truly understand their budgets in real time. It’s not just about access to data. It’s about clarity, confidence, and better decisions.”
— Finance Leader, K-12 School District

Results

By modernizing financial visibility, the district achieved measurable operational improvements:

- **Reduced Administrative Burden**
 - Fewer routine budget inquiries
 - More time for strategic financial work
- **Empowered, Proactive Decision-Making**
 - Real-time visibility into balances and variances
 - Increased accountability at the building level
- **Scalable Financial Clarity**
 - Improved forecasting and planning
 - Support for continued district growth

Why It Matters

For many school districts, the challenge isn't access to financial data—it's making that data understandable and actionable.

FiscalVue enables districts to:

- Turn complex financial data into **clear, actionable insight**
- Extend financial visibility beyond the finance office
- Improve efficiency without replacing core financial systems
- Make better financial decisions with confidence

Conclusion

By implementing FiscalVue, this school district transformed financial management from a centralized, reactive process into a proactive capability shared across the organization.

The result? **Better visibility. Better decisions. Better outcomes for students and the community.**
